

Coming to Life

“Dad, where does the water go when the rivers dry up?” asked Sean after crossing another dry river bed. “Some of the water flows down stream,” dad told him. “But a lot evaporates in this hot climate. The sun’s heat turns the water into an invisible gas called water vapour. It floats up into the air and forms into clouds. Then it eventually returns to earth as rain.” In the outback, it doesn’t rain very often, but when it does the desert comes to life and blooms.

Listen to God! Isaiah 55:10-12

Just as the rain God sends brings seeds to life, God’s Word gives life to us. In this chapter, Isaiah is telling us that although we can never earn anything from God, he wants to freely give us a wonderful life with him.

What do we have to do to receive this life? Verse 6 tells us.

Binara the nosey frilled neck lizard says why don’t you plant some flower seeds in a pot of soil and see if they will grow. You will have to remember to water them often (and make sure they get some sunshine too).

Colour in the verse and try to memorise it.

Isaiah 55:6

Turn to the Lord!

Kangaroo rat 65% water
Humans 75% water
Tomato 95% water
Apple 85%water

He can still be found.

Call out to God! He is here.

Talk to God!

Almighty God, who sends the rain; everything you made praises you and tells you how great you are. We praise and thank you for the life you give us too.
